What is Greenhouse Gas?

Greenhouse Gas	Source
Carbon Dioxide (CO ₂)	Combustion
Methane (CH ₄)	Landfills, coal mines, oil/gas production, agriculture
Nitrous Oxide (N ₂ O)	Combustion, Fertilizers
Hydrofluorocarbons (HFCs)	Semiconductors, refrigeration, fire protection
Perfluorocarbons (PFCs)/C _x F _x)	Semiconductors, refrigeration, fire protection
Sulfur Hexafluoride (SF ₆)	Electrical Power circuit breakers, switchgear

Why do we Care?

- Global average temperature has increased over the 20th century by about 0.6°C.
- Snow cover and ice extent have decreased
- Global average sea level has risen and ocean heat content has increased
- Changes have also occurred in other important aspects of climate.

Fun Facts

- A sea level rise of 39 inches (1 meter) would turn about 56 million people in 84 developing countries into refugees
- If the Greenland ice sheet melted the sea level could rise 7 meters.
- 1990's was the warmest decade and 1998 was the warmest.

California...

- 34 million people and growing
- 5th largest economy in the world
- 5th largest consumer of energy
- 2nd largest consumer of gasoline
- 5th most economical energy consuming economy
- 40% of western US electricity market
- Lowest US per capita electricity usage

California...

- Peak demand – 51,859 megawatts (2003)
- Over 53,700 megawatts generated
- Over 25.5 million vehicles
- 80% live near the coast
- 50% of water supply from snow pack
- 20% of electricity from hydropower
- 29% of peak from air conditioning

California Sea Levels

- California has seen a 7" rise in 150 years
- IPCC projects 4 – 35" sea level rise by 2100
- Concerns over levee stability and salt water intrusion

California Snow Pack

- Warmer Winters Have:
 - Reduced snow pack
 - Earlier snow melt
 - Decreased spring runoff by 10%
 - Major effects on water supply, water distribution, and water ways

When did this start?

- 1988 AB 4420 – Potential impacts of climate change
- 1991 – Global Climate Change: Potential impacts and Policy Recommendations
- 1997 – Global Climate Change Report: Greenhouse Gas Emissions Reduction Strategies for California

1991 Recommendations

- Promote Energy-Efficiency
- Account for environmental externalities
- Promote renewable generation
- Promote high-efficiency gas generation
- Improve forestry, solid waste and recycling, and livestock management

1991 Recommendations

- Expand markets for alternative fuels
- Promote R&D on biomass-based fuels
- Reduce vehicle miles traveled
- Expand land use planning to manage transportation demand

2000 Efforts

- SB 1771 & 527
 - Greenhouse Gas Emissions
 - California Climate Action Registry
 - Update of GHG inventory (every 5 years)
 - Climate Change Program

2000 Efforts

- AB 2076
 - Reduce Petroleum Dependence
 - Transportation Energy Efficiency Measures
 - Advanced vehicle technologies, including alternative fuel vehicles
 - Non-Petroleum and Alternative Fuels
 - Measures to Affect Consumer Fuel Demand

California Energy Report

- Integrated Energy Policy Report
 - Partner with neighbors
 - Require reporting of power plant GHG emissions
 - Support the goals to reduce petroleum consumption
 - Use sustainable energy and environmental designs in state buildings.
 - Require state agencies to incorporate climate change mitigation and adaptation strategies in planning and policy documents

West Coast Governor's Global Warming Initiative

- California, Oregon and Washington
- Reduce GHG emissions on west coast
- Focusing on:
 - Energy efficiency
 - Renewable energy
 - Port and truck stop emissions
 - State fleets
 - Emission inventories and reporting protocols

Joint Agency Climate Team

- Resources Agency
- California EPA
- Business, Transportation and Housing
- General Services
- Office of Planning and Research

Schwarzenegger's Action Plan for California's Environment

- Recommend GHG emission reduction target
- Accelerate the RPS to 33% by 2020
- Accelerate use of solar photovoltaic
- Reduce electricity consumption by 20%
- Reduce petroleum dependence
- Create the "Hydrogen Highway"
- Coordinate with the Northeast and Europe
- Implement the Green Building Bank

California Global Warming Solutions Act of 2006 (AB32)

- Mandatory Reporting
 - 1/1/08 require annual reporting
- 1990 State GHG Emissions
- 2020 Emission Limit
- Early Action Emission Reduction Measures
- Scoping Plan

California Global Warming Solutions Act of 2006

- Emission Limits in 2012
- Market-Based Compliance Mechanisms
- Enforcement
- Safety Valves
- Advisory Committees
 - Environmental Justice
 - Economic Technology Advancement

Cap and Trade

- Regulatory authority sets a cap on total emissions
- Authority creates allowances to emit a specific quantity
- Authority distributes allowances
- Allowances are measured
- If there are excess (credits) it can sell them
- Not enough then it must buy them
- If not met penalties and/or sanctions
